Systems Integration/Video Streaming Engineer

Providing solutions to ensure optimal, resilient, and secure end-to-end content delivery.

Experienced engineer with proven leadership and collaboration skills to deliver streaming and Title 6 video services. Translates business requirements to technical specifications, end-to-end integration, deployment, and testing. Provides high impact non-complex technical and process solution using skills in the following areas.

- Systems Integration and Testing
- End-to-End Video Streaming
- MPEG2, MPEG4, HEVC Analysis
- Troubleshooting / Root Cause Analysis
- Video Quality Assessment
- Microservices and Infrastructure Deployment
- AI Development
- Capacity Analysis and Management

Technical / Specialty Skills:

- **Video Streaming:** MPEG2, MPEG4, AVC, HEVC, CMAF, ffmpeg, Adaptive Bit Rate (ABR), Dynamic Adaptive Streaming over HTTP (DASH), HTTP Live Streaming (HLS), Ad Insertion (SSAI), Widevine, Fairplay, Dolby audio, CC (TTML, CEA-608/708), HDR
- **Technologies:** Kubernetes, Amazon Web Services (AWS), Virtual Machines, Docker, GitHub, Python, OpenAI, REST-API, Shell scripting, JavaScript, HTML, CSS, Grafana, Splunk
- **People Skills:** Leadership, Management, Collaboration, Mentoring

Professional Experience

BROADPEAK TECHNOLOGIES, Denver, CO

2024 - Nov '25

Pre-Sales Manager, North American Market

Managed relationships, requirements, feature delivery and presented Proof-of-Concept for different streaming services.

- Presented solutions to large video providers with end-to-end integration of Broadpeak services such as live, Time Shift, CDVR and Video-on-Demand (VOD).
- Troubleshoot issues to ensure packaging (live and VOD) and content management for HLS, DASH and CMAF based deliveries.
- Worked with customers and application developers to fulfil customer requirements for OTT streaming.

COMCAST CORPORATION, Centennial, CO

Principal Engineer, Systems Integration Engineer, VIPER

2016 - 2023

Led system integration for Title 6 and OTT Video-on-Demand (VOD) services ranging from deployment verification to component testing and troubleshooting per technical requirements and specifications.

- Deployed Kubernetes clusters to integrate and test end-to-end VOD delivery applications for global partners, fostering reliable content distribution for DASH and HLS based video streaming to millions of clients.
- Led war games, ensuring resiliency and verify failover mechanisms for global partners resulting in high reliability in streaming across the footprint.
- Conceptualized and designed a smart monitoring system for anomaly detection, reducing troubleshooting time by using KPI from each component.
- Reduced latency by writing Python scripts for comprehensive data analysis of key components in delivery to determine VOD Service Level Indicators and Objectives (SLO / SLI) to improve video playback optimization.

COMCAST CORPORATION, Centennial, CO

Principal Engineer, Cloud Digital Video Recorder Deployment, National Video Deployment Engineering **2014 - 2016**

Devised strategy to deploy, integrate, and test hardware in geographically dispersed data centers for recording and storage of broadcast content.

- Led system integration team as Subject Matter Expert for testing and troubleshooting end-to-end broadcast and cloud digital video reorder (CDVR) systems.
- Wrote scripts to automate deployment, managing deployment engineering team to configure VDE advertisement servers.
- Reduced deployment time by over 90%, resulting in \$250K+ savings by automating server deployments and test execution to decrease overall deployment cycle time and improve efficiency.

COMCAST CORPORATION, Centennial, CO

Senior Engineer, Comcast CDN Capacity Augments, National Video Deployment Engineering **2012 - 2014**

Deployed video-on-demand and Content Delivery Network (CDN) infrastructure for legacy and streaming services.

- Automated capacity planner and back-office design configurator for VOD systems, resulting in elimination of computational errors and reduced deployment time.
- Authored technical specifications, and methods and procedures, utilized while turning up servers with standard configurations resulting in improving configuration accuracy and reducing deployment time.

COMCAST CORPORATION, Centennial, CO

Video Quality, Comcast Media Center, Centennial CO **2010 - 2012**

Measured and improved video quality for the national lineup. Collected data and generated reports for all regions and content providers to monitor quality and recommend improvement strategies.

- Improved video quality assessment scores in video quality by over 10% by designing a system to monitor and improve the video delivery on MPEG2/H.264 encoded videos.
- Collaborated with vendors to fine-tune algorithms and close gap between subjective and objective MOS, leading to automated monitoring of channel lineup increasing sample size and frequency over 75%.
- Tested code drops for video quality systems, encoders / decoders, and multiplexers, ensuring specification compliance for production deployments.
- Investigated issues with Title 6 requirements such as subtitling CEA 608/708 in production environment (SDI, ASI, multicast and unicast), collaborating with developers and tested patches for deployment to live customers to verify compliance.

COMCAST CORPORATION, Centennial, CO

System Integration and Test Engineer, National Engineering & Technical Operations, Centennial CO **2007 - 2010**

Tested compliance and approved Next Generation on Demand systems for deployment in production environment.

- Refined requirement and associated documents for system integration by working with Product, Architecture, and other engineering teams.
- Performed system integration test for video-on-demand service with Cisco and Broadbus pumps, Tandberg, and SeaChange back offices, and Cisco routers and switches for legacy and Next Generation on Demand architectures.

Additional Experience

QWEST CORPORATION / LUMEN TECHNOLOGIES, Littleton, CO **2002 - 2007**

Lead Engineer Technology Management

Evaluated technologies and designed test video-on-demand systems in the lab to ensure system performance per the requirements. Designed point-to-point videoservices for major events. Subject Matter Expert for integration testing of VOD and Ad Insertion.

- Recommended video equipment for 2002 Salt Lake City Olympic Games for Outside-the-Fence video network, ensuring meeting budget requirement of \$5.0M and International Olympics Committee (IOC) deadlines.
- Designed and deployed video network (SDI/ASI) for broadcasters 2004 Iowa Caucuses, reusing existing equipment.
- Served as instrumental member of Fiber-to-the-Premises (FTTP) project deployment team, creating affiliate billing process, unit cost, and budget monitoring (approximately \$2.2M), ensuring project met budget limitations.
- Authored and published technical publications defining standard specifications for FCC tariffed video and data services.

Education

- **Master of Engineering (ME)**, Engineering Management (Operations & Logistics), The University of Colorado, Boulder, CO.
Minor: Telecommunications
- **Bachelor of Science (BS)**, Engineering (Digital Systems, Measurements and Control Engineering), Idaho State University, Pocatello, ID
- Certification, AWS Cloud Technical Essentials
